## IDS Verify

---

Introducing IDS Verify, this advanced Vision-Based system integrates with RFID systems to ensure accurate cow identification. Using advanced Machine Learning technology, it cross-references visual data and RFID tags, instantly correcting errors for reliable data.

IDS Verify integrates with herd management systems to correct errors in RFID based animal identification. Strategically placed cameras capture clear images of individual cows during RFID tag recording. The system connects with RFID and herd management software, creating a centralised database for smooth data sharing. Utilising visual data, IDS Verify can automatically identify and correct RFID mis-reads. The addition of body condition scoring empowers farmer with valuable health insights for every cow. With IDS Verify, farmers can be more confident in the accuracy of their data, enabling them to make more informed decisions.

### IDS Verify

- can integrate into existing RFID systems.
- takes a 'passport photo' of each cow to ensure correct RFID verification.
- body condition scoring supports farmers in maintaining animal well-being.
- remote access.
